

ABSTRACT OF THE DISCLOSURE

CHIP CONNECTION METHOD AND DEVICE

The invention relates to an electronic device comprising:

- a circuit, comprising a first and a
5 second face, the first face being provided with
electrical connection means,
- a transfer element, comprising a first
face and a second face, and being assembled to the
second face of the active element through its first
10 face, and comprising electrical connection means on its
second face,
- a connection between the electrical
connection means of the active element and the
electrical connection means of the transfer element.
